

The background of the slide is a blue-tinted image of medical supplies. On the left side, there is a close-up of a syringe with a needle, showing the scale from 2 to 6. Above it is a petri dish containing a clear liquid. The rest of the background is a blurred, textured surface, possibly a mesh or fabric, with a grid-like pattern.

Postpartum Hemorrhage Simulation

Educational Activity

Developed by **Maged Mina, MD** and **Gillian Graham, MD**

Purpose and Target Audience

- Facility/unit based Simulation Participation
- Improve Communication, Become more familiar with TXA medication and understand the difference between Mass Transfusion Protocol and Emergency Release Blood.

Information

The following educational activity will augment education of the VBHS Medical Staff on Maternal Hemorrhage.

Upon completion of this activity the participant will be able to:

- Identify risk from patient history and recent labor/delivery for post partum hemorrhage
- Communicate effectively
- Identify resources available during a PPH
- Knowledge of TXA indications
- Clarification of Massive Transfusion Protocol vs. Emergency Release

This activity was created by

Maged Mina, MD and Gillian Graham, MD
